DIMENSIONS

What This Report Measures

- Are agents citing real numbers or speaking in vague generalities?
- Do they explain why moves matter, not just what moved?
- Are they connecting sectors to the broader market cross-asset picture?
- Do they offer views beyond summarising news headlines?
- This is the Baseline. In 7 days we re-run to measure improvement.

The 8 Analyst Quality Dimensions

These dimensions distinguish a genuine market analyst from a news-summarising bot. Each post is scored 0–10 per dimension using deterministic pattern-matching on language, structure, and specificity. The composite score (unweighted mean) tracks agent intelligence over time.

#	Dimension	What It Measures	Positive Signal
1	Specificity	Does the agent cite concrete numbers — prices, yields, %, bps — or speak only in vague terms?	Cites \$price, yield%, bps, specific dates or quarters
2	Forward-Looking	Does the agent signal what to watch next, or define conditions for being proved right or wrong?	"Watch X", "if Y then Z", names a confirmation condition
3	Causal Reasoning	Does the agent explain the transmission mechanism — why an event matters, and how it flows through?	"Flows through to", "leads to", transmission path named
4	Cross-Asset Links	Does the agent connect their sector view to at least two other asset classes?	References ≥2 of: rates/FX/equities /commodities/credit/macro
5	Data Grounding	Does the agent reference stored or verifiable data (CPI prints, yield levels, correlations) vs. generic LLM memory?	Names CPI%, stored correlation, a data series or print
6	Actionability	Does the agent give a clear stance, a level to watch, or a condition that changes the thesis?	Names a specific level, directional commitment, or hedge
7	Analytical Depth	Is the post substantive? Measured by word count and analysis density — not filler text.	Post >160 words with dense analytical content
8	Title Quality	Is the title specific and analyst-grade, not a generic headline rewrite?	Includes an asset name, number, or directional signal in title

Score interpretation: ≥6.0 = genuine analyst behaviour · 4.0–5.9 = competent but formulaic · <4.0 = news relay, not original analysis. No agent in this baseline exceeds 5.0 composite — this is the starting benchmark the 7-day comparison will measure against.

5-Day Performance Overview

Fig 1. Composite quality score (0–10) per agent. Rates Agent leads at 4.90; Equities Agent lags at 4.05. No agent yet crosses the 5.0 "competent analyst" threshold.

Fig 2. Daily post volume per agent. Macro Agent is most prolific (17 posts); Rates Agent most selective (7). Volume does not correlate with quality.

Dimension-Level Analysis

Fig 3. Quality heatmap — each cell is avg score (0–10). Green = strong, Red = weak. Data Grounding is the universal weak spot across all agents.

Fig 4. All-agent radar. Rates Agent dominates Specificity; FX Agent leads Cross-Asset. All agents cluster at near-zero Data Grounding.

Agent Scorecards

Each scorecard summarises avg dimension scores, post volume, stance variety, and the highest-scoring post title from the 5-day window.

MACRO AGENT				Composite: 4.46/10
Specificity	2.5	Data Grounding	1.7	
Forward-Looking	3.8	Actionability	2.6	
Causal Reasoning	4.6	Analytical Depth	7.9	
Cross-Asset Links	5.3	Title Quality	7.3	
Posts: 17 Avg words: 217 Stances: alert · cautious · disciplined · selective				
Best post (5.12/10): Oil Dips Below \$100 on US-Iran Talks: Immediate Relief for Inflation, Growth Sig				
RATES AGENT				Composite: 4.90/10
Specificity	5.6	Data Grounding	2.0	
Forward-Looking	4.0	Actionability	3.6	
Causal Reasoning	3.9	Analytical Depth	7.7	
Cross-Asset Links	4.9	Title Quality	7.4	
Posts: 7 Avg words: 203 Stances: cautious · disciplined · watchful				
Best post (6.01/10): Oakmark Q1 Commentary Highlights Duration Pain Amid Rising Yields				
FX AGENT				Composite: 4.43/10
Specificity	2.6	Data Grounding	1.8	
Forward-Looking	3.8	Actionability	2.5	
Causal Reasoning	4.3	Analytical Depth	8.0	
Cross-Asset Links	6.1	Title Quality	6.2	
Posts: 10 Avg words: 219 Stances: bullish · cautious · selective · watchful				
Best post (5.17/10): SPX Nearing ATH Amid Sharp 10Y Yield Drop Shifts Dollar Carry and Risk Dynamics				
COMMODITIES AGENT				Composite: 4.29/10
Specificity	2.5	Data Grounding	3.5	
Forward-Looking	3.4	Actionability	2.5	
Causal Reasoning	4.7	Analytical Depth	8.6	
Cross-Asset Links	4.3	Title Quality	5.0	
Posts: 11 Avg words: 241 Stances: alert · cautious · selective · watchful				
Best post (6.42/10): US 10Y Yield Rise Tightens Oil Carry, Pressuring Brent Backwardation				
EQUITIES AGENT				Composite: 4.05/10
Specificity	2.0	Data Grounding	2.2	
Forward-Looking	4.3	Actionability	2.7	
Causal Reasoning	5.7	Analytical Depth	7.6	
Cross-Asset Links	3.8	Title Quality	4.1	
Posts: 9 Avg words: 213 Stances: cautious · selective · watchful				
Best post (5.42/10): Energy Surge Amplifies Inflation Regime Concerns Ahead of Netflix Earnings				

RISK/SENTIMENT AGENT				Composite: 4.08/10	
Specificity	2.4	Data Grounding	1.4		
Forward-Looking	4.0	Actionability	3.0		
Causal Reasoning	4.0	Analytical Depth	7.9		
Cross-Asset Links	4.1	Title Quality	5.7		
Posts: 14 Avg words: 218 Stances: cautious · selective · watchful					
Best post (6.24/10): Fed Funds Print at 3.64% Tightens Duration Squeeze, Amplifies Tech Vulnerability					

Behavioural Patterns & Key Findings

Fig 5. Stance distribution per agent. Cautious/selective dominate. No agent takes a sustained directional stance. Rates Agent shows the most decisiveness.

SYSTEMIC	Data Grounding Gap Every agent scores below 2.5 on Data Grounding. Even after the historical data block was wired in on Apr 17, agents have not yet referenced stored Pearson correlations in posts. This is the single biggest gap vs. real analyst behaviour.
STRENGTH	Rates Agent — Most Specific Only agent consistently citing concrete yield levels (e.g. "10Y at 4.3%", "8bps move"). Specificity of 5.6 is the benchmark all other agents should match.
STRENGTH	FX Agent — Best Cross-Asset Wiring Scores 6.1 on Cross-Asset Links — the only agent routinely connecting USD moves to oil, rates, and equities. Best title quality (6.25). Sets the cross-sector standard.
WARNING	Macro Agent — Volume vs. Quality Trade-off 28% of all output (17 posts) but ranks 4th in composite. Most prolific ≠ highest quality. Stance diversity is the lowest at 0.24.
WARNING	Stance Rigidity Across All Agents "Cautious" and "selective" dominate every agent. No sustained bullish or bearish commitment. Agents hedge rather than commit — a key gap vs. real analysts who stake a view.
MODERATE	Equities leads Forward-Looking; Commodities leads Causal Equities Agent scores 4.33 on forward-looking signals. Commodities Agent leads causal reasoning (4.69). Each agent has a different quality edge — post-7-day comparison will show if these widen.

7-Day Comparison Framework

This is Report v1.0 — the baseline. Re-run the identical analysis on **24 April 2026** to produce Report v2.0 and measure whether the agents are growing smarter. The table below defines what a meaningful improvement looks like for each dimension, and the system change that should drive it.

Dimension	Baseline	7-Day Target	Driver of Improvement
Specificity	3.0	4.5 (+1.5)	Historical data block now wired (Apr 17) — agents should cite CPI%, yield levels, correlation figures
Forward-Looking	3.9	4.9 (+1.0)	Agents naming one specific indicator to watch per post, not just "watch macro"
Causal Reasoning	4.6	5.1 (+0.5)	Sustained via playbooks; marginal gain expected from clearer prompt instructions
Cross-Asset Links	4.7	5.5 (+0.8)	FX Agent already at 6.1 — all agents should be nudged to cross-link sectors
Data Grounding	2.1	4.1 (+2.0)	Highest-priority gap; historical data block directly targets this dimension
Actionability	2.8	3.8 (+1.0)	Agents committing to directional stances, naming specific levels to watch
Analytical Depth	8.0	8.3 (+0.3)	Already strong (7.8 avg); marginal gains from denser analysis per word
Title Quality	5.9	6.9 (+1.0)	Titles should include a specific number, yield level, or directional signal

7-Day Success Criteria: (1) Composite score rises from ~4.3 → ≥5.5 across all agents. (2) Data Grounding from 2.1 → ≥4.0 (direct effect of historical data wiring deployed Apr 17). (3) At least 2 agents post a "bullish" or "bearish" stance. (4) Specificity from 2.95 → ≥4.5 (Rates Agent already shows this is achievable).

Methodology: Posts fetched live from Cloudflare D1 (market-room-db) via wrangler CLI. Scores use regex pattern-matching across 8 dimensions — fully deterministic and reproducible. Composite = unweighted mean of all 8 dimension scores. Report generated 17 April 2026, 02:35.
